EDUCATION

2022-PRESENT, ISTANBUL

COMPUTER ENGINEERING, YEDITEPE UNIVERSITY

I am currently continuing my third year of undergraduate studies in Computer Engineering at Yeditepe University with a 50% scholarship in Istanbul. During my education, I have developed a strong foundation in core engineering fields such as data structures, algorithms, systems programming, artificial intelligence, software engineering, and database management. Through team projects and individual studies, I continue to improve my problem-solving, algorithmic thinking, and software development skills.

EXPERIENCE

JUNE 2025-DECEMBER 2025(REMOTE)

AI & FULL-STACK INTERN , CREWLABS TECHNOLOGY COMPANY

During my internship at CrewLabs Teknoloji, I worked on two main projects. First, I developed an AI-based decision-making system using the ElevenLabs AI API that analyzes restaurant orders and enables voice-based responses. This system allows users to place orders verbally while the AI analyzes incoming data and performs certain automated actions. In the second project, I contributed to the backend and PostgreSQL database management of a project developed with Go. On the frontend side, I built an interface where customers can submit feedback using Next.js 14 (React), TypeScript, Tailwind CSS, and shadcn/ui. This experience provided me with practical knowledge in designing scalable AI and web applications, integration management, and modern software architectures.

JUNE 2025 – SEPTEMBER 2025 (ON-SITE, ULUTEK TEKNOKENT)

COMPUTER VISION INTERN, FIZIBIL ENGINEERING & SOFTWARE COMPANY

At Ulutek Teknokent within the Computer Engineering department, I participated in computer vision projects for number detection systems. Using LabelImg, I prepared datasets and implemented object detection models with YOLOv8. I also used PaddleOCR for recognizing and extracting numerical data. During the training process, I gained experience in deep learning-based image processing, model training (epoch-based), and accuracy optimization. This project helped me develop strong practical skills in applied AI models and computer vision applications.

SEPTEMBER 2025 – PRESENT

SOFTWARE TEAM MEMBER, ZAFER UAV TEAM

As a member of the software team in the Zafer UAV Team, I work on autonomous systems and computer vision applications. Together with my team, I actively participate in algorithm development processes for the Teknofest competition.

Areas of work:

Image processing algorithms in ROS and Gazebo environments

Autonomous mission scenario development

Technologies Used: ROS, Gazebo, Python, OpenCV, Linux

Contribution to team-based software development processes

SKILLS

- GO
- Python
- PostgreSQL
- TypeScript / JavaScript
- React / Next.js 14
- OpenCV / YOLOv8 / PaddleOCR
- Git / GitHub / Postman / DBeaver
- Microservices Architecture / REST API / OOP
- ElevenLabs AI (Speech & Voice Integration)
- n8n (Automation Platform)
- İngilizce (Advanced Technical Reading & Writing)

PROJECTS

VOICE ASISSTANT

An AI-powered voice assistant integrated into hotel applications that analyzes user commands and performs specific tasks. The system processes voice commands and automates tasks using the ElevenLabs API and the n8n automation platform.

Technologies Used: ElevenLabs AI, n8n, Go, PostgreSQL, Next.js 14, React, TypeScript, Tailwind CSS, shadcn/ui

SURVEY MANAGEMENT SYSTEM

Built a QR-based survey platform allowing hotels and organizations to place location-specific QR codes on kiosks, departments, and floors, enabling customers to submit emoji-based feedback and comments for real-time service quality monitoring.

Technologies Used: Go, Next.js, PostgreSQL, TypeScript, REST APIs, QR Systems

TRIAGE – AI-BASED SUPPORT TICKET MANAGEMENT SYSTEM

Developed an AI-powered enterprise ticket management system using Local LLM integration for automated issue classification, intelligent prioritization, duplicate ticket detection, SLA monitoring, and secure internal support workflows.

Technologies Used: Python, FastAPI, PostgreSQL, JWT, Local LLM

RE-SMART – HEALTHCARE MANAGEMENT PLATFORM

Developed an integrated healthcare and accommodation management system for sanatorium facilities including patient management, reservation workflows, treatment scheduling, doctor and nurse administration, medical records, multilingual support, and operational automation.

Technologies Used: Go, Next.js, PostgreSQL, REST APIs

CORPORATE WEBSITE DEVELOPMENT PROJECTS

Developed modern and responsive corporate websites for various companies. Projects focused on user experience, performance optimization, and manageable content structures.

Technologies Used: Next.js, React, TypeScript, Tailwind CSS, Node.js, PostgreSQL, REST API

PERSONAL INFORMATION

- Address:İstanbul/Bursa,Turkey
- Birth Date:30.07.2002
